#### **ITEM**

- 19a. Give: (1) the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method;  
(2) the details of subsequent stages of selection and multiplication;  
(3) evidence of uniformity and stability; and  
(4) the type and frequency of variants during reproduction and multiplication and state how these variants may be identified
- 19b. Give a summary of the variety's distinctness. Clearly state how this application variety may be distinguished from all other varieties in the same crop. If the new variety is most similar to one variety or a group of related varieties:  
(1) identify these varieties and state all differences objectively;  
(2) attach replicated statistical data for characters expressed numerically and demonstrate that these are clear differences; and  
(3) submit, if helpful, seed and plant specimens or photographs (prints) of seed and plant comparisons which clearly indicate distinctness.
- 19c. Exhibit C forms are available from the PVPO Office for most crops; specify crop kind. Fill in Exhibit C (Objective Description of Variety) form as completely as possible to describe your variety.
- 19d. Optional additional characteristics and/or photographs. Describe any additional characteristics that cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the characteristics that are difficult to describe, such as plant habit, plant color, disease resistance, etc.
- 19e. Section 52(5) of the Act requires applicants to furnish a statement of the basis of the applicant's ownership. An Exhibit E form is available from the PVPO.
20. If "Yes" is specified (*seed of this variety be sold by variety name only, as a class of certified seed*), the applicant **MAY NOT** reverse this affirmative decision after the variety has been sold and so labeled, the decision published, or the certificate issued. However, if "No" has been specified, the applicant may change the choice. (See Regulations and Rules of Practice, Section 97.103).
23. See Sections 41, 42, and 43 of the Act and Section 97.5 of the regulations for eligibility requirements.
24. See Section 55 of the Act for instructions on claiming the benefit of an earlier filing date.

**TRITICALE '116'**

**Exhibit A. Origin and breeding history of the variety.**

Triticale 116 (98TV46506) is derived from the crossing of a number of experimental lines and the variety Tarasca 87, all developed at the International Maize and Wheat Improvement Center (CIMMYT) in Mexico. The female parent results from a cross of Ardilla by Snoopy with a plant selection from the cross of 11TSN79-3 by C-2. The resultant plant selection from this cross was made with a plant resulting from the cross of LT978.82 by Asad"S" by Tarasca 87 with the cross to Pika sib. The final cross resulting in triticale 116 was in 1994 between the female noted above with the variety triticale 105 which is a result of crossing the two CIMMYT triticale experimental lines Faras and Bullock.

An F6 generation head row, from an F5 derived plant selection, was bulk harvested and yield tested in the California Central Valley in 1998. At this point in time the experimental designation 98TV46506 was assigned to this experimental line, with the genealogy being  
AR/SPY6//11TSN79-3/C-2/3/PIKA"S"// LT978.82/ASAD"S"//TARASCA87  
/4/TRITICALE105.

The resultant F1 and subsequent generations were advanced using the pedigree method of selection practiced at both Woodland and Gonzales, California. (see Table A1 for a summary of selection criteria).

The seed purification program for 98TV46506 was begun in 1999, whereupon 24 heads were taken from yield trial plots in our Intermediate Yield Trial Nursery. Ten individual head rows were selected and bulked as potential varietal candidates. These were entered into yield trials in year 2001 and subsequently, three lines were bulked to become triticale 116. Pre-breeder seed was produced in 2003, followed by Breeder seed in 2004 and Foundation in 2005.

The variety appears to be uniform and stable, but can have some taller variants at a frequency of no more than 0.5%.

### Additional Narrative Description of Triticale 116

Triticale "116", currently marketed as one of the TRICAL® brand of forage triticale, is a spring-type, awned triticale that is fall-planted in the San Joaquin Valley of California. Its juvenile growth is erect. At boot stage 116 is yellow green, but leaves have a waxy bloom. Auricles of 116 are purple. The flag leaf is twisted and leaf carriage is upright. Stems of 116 do not have anthocyanin, and its necks are wavy and moderately hairy. Heads are middense and fusiform, with tan awns. Glumes are tan and pubescent, with oblique shoulder and acuminate beak. Seed of 116 is typically slightly wrinkled, amber, elliptical, with a brush that is large and midlong.

Triticale 116 is adapted to the San Joaquin Valley of California and will be marketed there for production of silage harvested in the soft dough stage, for which grain yield is a key attribute.
